

PRODUCTS AND SERVICES

MEDICAL GRADE FACIALS

1. *HydraFacial MD®* - A non-ablative facial rejuvenation treatment using 4-in-1 technology: Vortex Cleansing™, HydroPeel® Exfoliation, Vortex-Extraction™, and Vortex-Fusion. Perfect for all skin types, this treatment provides immediate results with no downtime. Effective for improving sun damage, uneven skin tone, hyperpigmentation, fine lines and wrinkles, dry or dehydrated skin, oily/congested skin and enlarged pores
2. *Chemical Peel Facial* – a nonsurgical aesthetic treatment which aims to improve skin health and skin appearance by using chemical agents to induce an accelerated exfoliation of the outermost layers of the skin. This process allows newer and healthier skin to be visible. It is particularly beneficial for mature skin which tends to have reduced Cell Renewal Factor (CRF) or slower cell turnover. Chemical Peels help reduce fine lines and wrinkles, correct photo damage, flatten scars, improve hyperpigmentation.
3.  *Anti-Aging Relaxing Medical Facial* – Stimulate the body’s natural healing processes using products from Oxygen Biological™. As we age, our skin cells begin to die, but pure oxygen replenishes the epidermis. Using “*The Oxygen Biological Infusion®*” line of products facilitates oxygen delivery which is time-released to help stable free radicals, one of the known factors contributing to the aging process.

MICRONEEDLING (also known as Collagen Induction Therapy)

Micro-needling involves using fine needles to create hundreds of tiny, invisible puncture wounds in the top layer of skin. Only devices registered and approved by Health Canada/FDA should be used since these devices have undergone safety testing in clinical trials. MicroNeedling can be used on the face, body and scalp for hair loss. MicroNeedling induces a controlled injury to skin whereby tiny wounds are created. The natural healing process of the skin is then stimulated to speed up the production of growth factors, collagen and elastin. This treatment helps improve fine lines and wrinkles, skin tone and texture, sagging skin, sun damaged skin, hyper/hypo-pigmentation, enlarged pores, stretch marks, some scars (Surgical, or Acne) and Alopecia (hair loss).

MICRONEEDLING Options include:

1. **Vit:Jal®**- A Serum combination of Hyaluronic Acid, amino acids & vitamins
2. **ProCell®** - Human Stem Cell Serum (Registered with Health Canada)
3. **Redensity I®**- Award Winning Injectable Hyaluronic Acid
4. **Platelet Rich Plasma (PRP)** - Plasma Tube (Registered with Health Canada)

A Bit about the Products Used with MicroNeedling:

- **Vit:Jal®** is part of PROMOITALIA Wellness Research Platinum Collection line of products made in Italy specifically indicated for fighting the causes of and effects of aging. This specially formulated serum mix includes Hyaluronic acid (one of the main components of connective tissue responsible for hydration and elasticity), Amino acids and vitamins
- **ProCell®** is made by Carion Medical Technologies and is a specific MicroNeedling serum mix composed of Stem Cytokines™, Hyaluronic acid and Recombinant Growth Factor TGF-β3 to further reduce inflammatory response. These are naturally occurring ingredients, normally found in skin. When applied after microneedling, this solution penetrates the micro-channels and delivers high concentrations of growth factors that enhances production of healthy new skin.
- **Redensity I®**- is made by Teoxane laboratories in Switzerland and Teosyal® PureSense Redensity I is a unique hyaluronic acid-based skin enhancer which prevents premature aging of skin, restores skin density and maintains skin glow. This is a medical grade product containing 15mg/ml of HA with a “dermo-restructuring complex” of 8 amino acids (Glycine, Lysine, Threonine, Proline, Isoleucine, Leucine, Valine and Arginine), 3 antioxidants (Glutathion, N-acetyl-L-cysteine and Alphaipoic Acid), vitamin B6 and minerals (Zinc and Copper).
- **Platelet Rich Plasma (PRP)** is a treatment using your own platelets, stem cells, and growth factors. Once injected into your skin, these substances will accelerate the normal healing process via new collagen formation at the injected area. This process brings long-lasting tissue rejuvenation by your own cells. The procedure involves drawing some of your own blood (like in a blood test), centrifuging blood (spinning it very fast for about 8 minutes), in order to separate the red blood cells from the plasma platelets. The plasma is then extracted from the tube and injected into your skin. You can add **PRP CANNULA** with this product to improve dark circles under your eyes

COSMETIC INJECTIONS

Neuromodulators or Toxin is a chemical produced by the Clostridium **Botulinum** bacteria. It is a protein derivative of the **toxin**, which, when injected into a muscle causes it to become weakened or inactivated. It temporarily stops the chemical messages from the nerve to the muscle thereby improving the appearance of wrinkles. Botulinum A Toxin injections have been approved by Health Canada and FDA for use in the cosmetic treatment of glabellar frown lines – the wrinkles between the eyebrows.

1. XEOMIN® – incobotulinumtoxin A is made by Merz Aesthetics is approved for intramuscular injection for the **temporary** improvement in the appearance of moderate to severe glabellar frown lines (the wrinkles between the eyebrows) in adult patients. XEOMIN® has an innovative manufacturing process which yields a highly purified protein formulation that can be stored at room temperature for up to 3 years – greatly reducing the risk of errors in storage temperature either during shipping, or in a medical office. *“Based on available data and my own clinical experience, XEOMIN® is a new therapy option that is easy to use and highly efficacious,”* says Dr. Mandar Jog, Professor of Neurology, University of Western Ontario and the Director of the Movement Disorders Program, London Health Sciences Centre, London, Ontario.

2. BOTOX® – onabotulinumtoxin A made by Allergan, is approved for use in cosmetic treatment for glabellar frown lines (the wrinkles between the eyebrows). BOTOX® injection treatment temporarily smoothes frown lines on the forehead, between the eyes, and at the base of the nose. Botox® is approved by Health Canada for the treatment of hyperhidrosis (excessive sweating). Allergan has the Botox® Access Program which works with your private health insurance plan to facilitate reimbursement based on the coverage of your plan.

DERMAL FILLERS

With advancing age, your skin undergoes a number of typical changes affecting its texture, volume and appearance. Static lines become visible when your face is relaxed; they form as part of the natural ageing process. The quality of your skin degenerates as a result of exposure to the sun and various lifestyle factors, such as smoking, bad nutrition habits and overuse of alcohol. The skin structure weakens and lines form.

Dermal fillers are approved by Health Canada for use as cosmetic injectables for moderate to severe wrinkles. They are made of hyaluronic acid or calcium hydroxylapatite (in the case of Radiesse®) and are ideal for the temporary smoothing and filling of wrinkles as well as being used for lip augmentation, skin rehydration and for restoring facial volume. In addition, most dermal filler products are available with lidocaine (local anesthetic) for a more comfortable treatment experience.
